BRENTWOOD Essex ENGLAND
Telephone 01-592 7300
Telex 99151

Subject: Exposure to Asbestos during Brake and Clutch Cleaning.

I enclose the final details of the meeting to be held in the Cinema at the Ford Central Office, Warley, on Wednesday, 26 March 1969. The meeting will commence promptly at 10.30 am with a welcome by Mr W Batty, Managing Director, Ford of Britain. Coffee will be available from 10.00 am.

A map is enclosed for the guidance of visitors arriving by car, and parking space will be available in the North Car Park, located across the road from the Central Office.

Visitors arriving by train may find it convenient to travel by the 9.24 am from Liverpool Street, due at Brentwood at 9.57 am, and transport from the station to Warley will be provided if requested in advance.

We are looking forward to welcoming you at Ford and hope that you will find the Conference both useful and enjoyable.

ASBESTOS CONFERENCE

The recent activity in investigating exposure to asbestos during brake and clutch maintenance arose from a letter from the Service Director of BMC to the Motor Agents Association, and to the Service Managers of other manufacturers. A GP had raised the matter relative to a patient who was employed in a Dealer's workshop with the Inspector of Factories who suggested that the operation could cause a "definite health hazard". It was also suggested that the current revision of the Asbestos Regulations would make reference to the Motor Repair Trade.

There was therefore a desire that the subject should be investigated and any necessary remedial measures sought in advance of the Legislation, so that Dealers could be advised, and Service Manuals amended as appropriate.

A meeting of interested parties was arranged by Dr White at Cowley in November 1967. At this meeting there was agreement that further investigations were required, and both Ford and BMC Industrial Hygiene Units undertook to continue their studies. A further meeting would be arranged when results were available.

Our report on passenger cars was sent to Dr White in July 1968 with an enquiry as to whether he proposed to re-convene the group. He suggested that the meeting be initiated from Ford, and we agreed to this, but suggested waiting until the completion of tests on commercial vehicles. This report was sent to Dr White

in November 1968, with advice that we were now proceeding to arrange the meeting. The arrangements have been made jointly by the Medical and Service Departments of Ford of Britain on behalf of the major motor manufacturers.

2.00 pm - 4.00 pm

SESSION B - The Solution

Possible alternatives to
asbestos as a friction material:

Mr D Hatch
Research Manager
Ferodo Ltd.

Control of the use of asbestos
containing friction materials -
a preliminary report:

Mr M L Bentley
Mintex Ltd.
(Asbestosis Research
Council - Environmental
Control Panel)

Alternative methods of cleaning:

(1) Mr G L Lee
Industrial Hygiene Dept.
British Leyland Motor
Corporation

" " " "

(2) Dr D E Hickish and
Mr K L Knight

Respirators for protection
against asbestos:

Mr S Luxon

Identification of potential
health problems in
Service Information:

Mr N R Gordon
Service Merchandising and
Training, Cars
Ford of Britain

Discussion

Summary of proceedings:

Mr G H Channing
