Manufacturers of Registers and Grilles for Gravity and Air Conditioning Systems; Wrought Metal Grilles for Concealing and Protecting Radiation

AIR CONDITIONING REGISTERS AND GRILLES

Auer Registers and Grilles for Air Conditioning have been designed to meet all modern requirements—appearance, practicability, and simplicity in installation and operation. They are made in various designs to harmonize with modern interiors. Constructed and tested to operate with high efficiency in any system of forced air, they are a departure, not merely an adaptation, from gravity registers. They are designed for easy installation in either new construction or remodeling.

No. 2030 Sidewall

The design shown is our standard design, termed *Classic*. It is very adaptable to most interiors; other designs, however, can be furnished.

This type is made with *double band frame* for extra rigid installation and for elimination of any possible warping of the face. The same model can be used without a valve, as a return.

No. 2010 Sidewall

This type is used in new construction exclusively. The sliding frame is anchored to studdings before plastering. After plastering, the register is easily attached to the frame and can be slid to the position desired between the studs.

The same type furnished without a valve is used as a return.

Auer Registers and Grilles can be furnished in any standard finish. Illustrated catalogue showing complete line of registers for all purposes and chart of open areas and capacities will be forwarded on request.

No. 2230C Sidewall

This illustration shows register directing air in three directions.

It can be made to direct air in one direction only or in two directions. The directing air blades can be set at any angle specified. Installation can be made with band frame or sliding frame as shown in previous illustrations.

No. 2005 Oblong

Auer Registers and Grilles can be furnished in many designs.

AIR CONDITIONING REGISTERS AND GRILLES

No. 311-A—ADJUSTABLE DIRECTED AIR FLOW

No. 311-A—Air Flow Downward Adjustable from straight to 45 deg.

The method of adjustment is simple as shown, and many directions and combinations can be developed to suit the need.

With "INDEPENDENT" Adjustable Directed Air Flow Registers and Grilles the Engineer is in complete control of the direction of air flow.

The directional adjustment can be made at the time of installation—or after the system is operating. Thus correcting unforeseen, or changed conditions.

Each interior grille bar is adjusted individually.

No. 321-A—ADJUSTABLE DIRECTED AIR FLOW

Standard registers are furnished with single valves;—they are also supplied with "Multiple Valves"—and with "Multiple Valves" adjusted individually—the Engineer is given a dual control of the air flow—being able to secure right and left together with up and down deflection at the same time.

Grille Bars set for right and left deflection. The grille bars are set in a firm tension, yet easily adjusted, with the tool sent with each order.

No. 321-A—Showing a combination of Adjustments

REGISTERS WITH TANDEM VALVES
