ASBESTOS FIBER COUNTS

I did asbestos fiber counts on 3 samples submitted by M. Michael on 4/1/82. The standard phase contrast method (NIOSH P&CAM 239) was used. Analytical data is recorded in Haskell Laboratory Notebook No. E-26816, pp. 4-6. Results are as follows. Contact me if you have any questions.

<u>Sample No.</u>	<u>Fibers/mm²</u>	<u>Air Volume (L)</u>	<u>Fibers/cm³</u>
250	42.50	60.0	0.6
259	17.92	180.0	0.09
262	25.42	600.0	0.04
