THERMOBLOC

Direct-Fired, Packaged Unit Heaters

One or more units may be installed where greater heating capacity is required.

THERMOBLOC is entirely new, revolutionary in design, draft free and occupies only a 30 inch diameter floor space, with an output of 550,000 B.T.U.'s at working level.

THERMOBLOC is shipped ready for installation, with only oil or gas and power line connection necessary to put it into operation. Where larger areas are to be heated, or more heat is required, more than one unit may be installed, either separately or in parallel.

THERMOBLOC affords adequate heating facilities for an entire plant or for additional heating source where needed. For summer, cool air may be drawn from the floor level and circulated at working level.

Information on other applications will be sent on request to:

THE THERMOBLOC DIVISION
PRAT DANIEL CORPORATION

68 Water Street • East Port Chester, Conn.

**SO WHY THROW YOUR HEATING
DOLLARS THROUGH THE ROOF!**

**INVESTIGATE
GRID
UNIT HEATERS**

THIS is exactly what you do everytime you buy a unit heater that fails to deliver warm air to the floor line—the working zone—where warm air is needed.

Learn about GRID Unit Heaters—how air delivery will save you heating dollars by delivering air to the working zone where heat is needed, with results in saving in fuel consumption, assuring the very ultimate from your heating dollar.

GRID heating sections are one piece construction high test cast iron—the metal for permanency . . . no electrolysis because there are no dissimilar metals used in GRID construction. Hence, no maintenance expense—no years of trouble free heating service. Every GRID Unit may be safely used for steam pressure up to 250 lbs. without reducing valves. Capacity tables and complete details upon request.

WAUSAU, WISCONSIN

**Revolving Discharge
Outlets for Thorough
Heat Coverage.**

The remarkable feature of Wing Revolving Unit Heaters that distinguishes them from other types of heating systems is the fact that the discharge outlets revolve. This assures a thorough circulation of the heated air to all parts of the working level regardless of obstacles. The slowly revolving outlets gently distribute the heat continuously in a constantly changing direction, eliminating hot and cold spots, chill corners or concentrated blasts of hot air. Write for Bulletin HR-5.

*Motor Driven
Revolving Unit Heater*

The Wing Turbine Driven Revolving Heater is a new type of unit heater in which the steam used for heating the air is first used to drive the fan, thus eliminating electric motor. This is accomplished by means of the new Wing All-Steel Steam Turbine. The turbine driven heater is especially valuable in installation where there is danger from explosive vapors, etc., although it may be used economically in practically any type of installation. Fixed discharge outlets also available.
