INSULATION MATERIALS
NEWBURGH PLANT

File
**PLAINTIFF'S
EXHIBIT**

DUP-422

No full-time insulators on this plant.

Ten employees do part-time insulating, 2% of the time.

The three most prevalent types of insulating materials used are fiber glass, 85% magnesia, and stick-tite.

There is no spraying of insulating materials at this location.

There has been no Asbestosis, Mesothelioma, or Carcinomas among the insulators.

No safety precautions are taken when sawing insulating materials or removing obsolete insulation. Cement boards are sawed with an abrasive disc. Dust masks will be used when performing this operation.
