Subject: Bulk Sample Analysis for Asbestos

The sample from the Trane heater core test stand (Dyno Lab) that you submitted on March 21, 1983 was analyzed for the presence of asbestos type and percentage. Environmental Research Group, Inc. of Ann Arbor performed the analysis by polarized light microscopy (PLM).

Results indicate positive identification for asbestos:

11% chrysotile
27% amosite

Therefore, this material must be regarded as containing asbestos, and all aspects of OSHA Asbestos Regulation 29 CFR 1910.1001 must be complied with. Please inform all appropriate parties of these findings, and ensure that the Company asbestos policy is followed.
