yes or no.

A No.

THE COURT: Next question.

Q Why not?

A Well, because there are other activities that go on besides the brake jobs. There would be the cleaning, as I indicated.

Did these other people sweep up their areas? Did Mr. Grewe clean up his area, or did he go home and just go back for those particular times when somebody else was working?

All of these things you need to know if you are going to try to calculate a time-weighted average.

Q Let me ask you a very simple question then.

I understand you are not able to convert it into a time-weighted average, but are you able to say whatever the time-weighted average would be, it would be lower than the peak numbers that you got during the test?

A No, I can't tell you that.
