

RUST is a ROBBER.

THERE's a way to stop rust from robbing metal of its life. Paint metal surfaces with Dutch Boy Red-Lead. Then you can be sure they are protected against "rust—the robber."

Paint made with Dutch Boy Red-Lead provides a solid, tough, tenacious coating—one that not only keeps out rust-forming moisture but also resists the destructive action of other common causes of corrosion, such as gases, smoke and salt water.

Dutch Boy Red-Lead comes in both paste and liquid form, the latter including a quick-drying type for use when allowable drying time is short. The pigment in every case is pure red-lead that contains more than 97% PbO_2 , thus assuring easier application, higher spreading rate, and a uniform film of greater density.

For complete information on protecting iron and steel against corrosion, send for our free booklet, "Structural Metal Painting." It covers such
