Yesterday we mentioned again that the Scottish work by
Wickham had not been published. I find that in the
bibliography for the year which Wickham is to
publish shortly this comment -- "Considerable effort
was made to identify the unknown peaks present in the
chromatograms but these attempts were unsuccessful until
the samples returned from Sweden (22,23) and Great Britain (24)
identifying polychlorinated biphenyls in European wildlife."

The bibliography shows the references to be:

22. Jensen, S., Nord. Skandinavisk 32, 612 (1966).
23. Wickham, G., J. Gen. Sci. Anal. Chem. 52, 1969 (1967).
24. Holmes, A. G., and Simmons, J. H., and Yarrow, J. O'G.,
Nature 192, 257 (1967).

I am not sure we have copies of 22 and 23. I fear I don't.
