MEMORANDUM REPORT M-153
BRUSHING LACQUER

In the subject report I see no indication of what happens when this material is second coated. As I recall it one of the important places where the old nitrocellulose brush type "Duco" fell down was because of the inability of people to apply a second coat without picking up the first one with resulting extremely difficult brushing when they tried to do a job that had real hiding. I think it might be worthwhile supplementing the investigation of this material by this test before I pass the information along to the Sales Department.
