St. Louis

Thanks for passing along the Organic Research and Development Report for July, 1968.

There are a number of items of interest which we will want to follow. In the cellu-chem group, the work on size is of particular interest and we now have contact here through Lauch. Areas where I don't believe we've had much contact are in general chemicals and plasticizers dealing with fire-retardant foam and vinyl additives and components. We would like to determine the objectives and status of these various programs and their possible interest to us.

Could you obtain any further information on these programs for us and indicate whom we should contact for more detailed discussion. Items of interest contained in July report include TCPA, Phosgard/Santicizer, flame retarding urethane. Could we also get on the distribution list?
