

	Page		Page
Greenhouse heating		heat conductivity for liquids	285
heating apparatus	215	heat transfer	279, 280, 284, 285
heating coils	216	heat transmission	277
hot water radiation	216, 217	logarithmic mean temperature difference	281, 283
humid atmosphere	217	resistance of oil water film	282
pipe expansion	215	variation of	284, 285
radiation	215, 216	velocity of fluid	277, 278
structure	215	viscosity of oil	282, 283
temperatures	215, 216	viscosity of water	282, 283
Gravity systems		Heating	
for hot water supply	342	air requirements for gas	237
hot water heating	121	amount of radiation	65, 113, 242
one pipe steam	80	apparatus for greenhouse heating	215
two pipe steam	81	automatic control of humidity in fan furnace	190
warm-air furnace	167	automatic temperature control	190
Grilles		boilers	133
free area of recirculating	175	central systems	203
location of	175	chimneys	147
H		conduits	211
Heat		control of installations	243, 245
allowance for infiltration	48, 53, 54, 55	convection type of space heaters	236
area of losses	46	costs in federal buildings	354
automatic heat	259, 260	costs of gas heating	243
balance of gas burning equipment	238	curve of gas consumption	239
calculating losses	3, 4	degree-days in gas	241
calculating for, transmission losses	46, 47	description of piping systems for steam	80
calculation of, emission of indirect radiators	71, 72	design of gravity circulating warm air	167
capacity of leader pipe	169	systems	79, 97
coefficient of radiator	113, 114	design problems in steam systems	87, 115
conversion factors for emission	67, 68, 69, 70	determination of pipe sizes	128, 129
dissipated from human body	373	determining pipe sizes for gravity hot water	350
effect of	77, 78	design problems in steam systems	233
effect of humidity on	75	emission of	238
emission of radiator	65, 67	gas efficiencies	127
from occupants, lights, etc	360	gravity hot water	167
heat content of oils	219, 221	gravity warm-air furnace	238
insulation for pipes and surfaces	247	heat balance of gas burning apparatus	242
latent	373	hot water heating systems with gas	190
loss by evaporation	377	humidifying pans in fan furnace	80, 81
loss computations	4, 5	one-pipe and two-pipe steam system	130
loss for average man	376	Hot water systems	189
loss in money and fuel	247, 249	pipe sizes and connections for hot water	238, 239
loss per person	376	position of fan in furnace	3
loss per unit area from flat surfaces	247	ratings for gas appliances	356
losses from bare fittings	252, 258	requirements	133, 134
losses from buildings	3, 169	requirements for federal buildings	7
nicholls meter	14	selection of boilers	435
pipe and surface losses	247	specifications for, systems	167
radiant	449	steam, pipe sizes	214
radiation and convection	10, 11	steam requirements for air	82
requirements	63	systems of warm-air	190
sensible	266	tunnels	85
sources	373	two-pipe gravity, systems	83
transfer coefficient	60, 61	use of air washers in fan furnace	81
transfer in hot water heating systems	280, 281	vacuum pump, systems	167
transmission coefficients	113	vapor, systems	67
transmission data	7, 10, 13, 21, 47	vapor vacuum system of	
value of gas	13	with air	
Heaters	237, 238	zone of occupancy	
built-in or concealed	66	Heating systems	
cabinet	66	application of automatic control to warm air	265
convection type of, space	236	capacity of steam lines at various pitches	95
direct transmission	193	comparative cost of hot water	116
extended surface	69	empirical rules for hot water	127
for fan furnace heating	189	example of use of diagrams for hot water	115
indirect	66	forced circulation in hot water	119
industrial unit	197	friction heads in pipes and elbows in hot	
kind of heat emitting units	65, 66	water	125, 126
luminous flame reflector	236	high temperature drying	452
operation of	71	hot water	113
propeller fan type unit	199	method of determining pipe sizes for hot	
radiant	236	water	122, 123, 125, 126, 127
rating of	66, 71	pressure, air sealed or closed hot water	381
recirculating unit	198, 199	quantity of air for indirect	65, 113
selection of	73, 115	radiation for	131, 132
space	236	tank sizes for hot water	113
suspended unit	199	temperature difference, hot water	
useful heat output of	67	Hoods	
Heat exchangers		design of	468
average temperature difference	283, 280	Hospitals	
coefficient of heat transfer	280, 281	air for ventilation	358
design of	285, 286	hot water requirements	342
economics in design of	286	water requirements for	342

	Page		Page
Hospital equipment		electric	324
blanket and solution warmers	329	fish refrigerator	320
condenser exhaust	334	gas connections for	326
nursery equipment	331	grease traps for	326
piping for sterilizers	331	ice chests	320
proportioning equipment	328	ice cream and sherbets	320
size of waste connections	332	kettles, ovens and steamers, sizes of	318, 319
sterilization	331	marine hospital	351, 352, 353
sterilizer data	333, 334	mixing machines	320
sterilizers, cost of operation of	327	power requirements	324
sterilizers, rating of	327	proportioning equipment	317
sterilizers, selection of types of	327	range hood	317, 318
sterilizers, water	328, 329	rated capacity of dish washing machines	321
utility rooms	330	return connections	326
waste and vent systems	332, 334	sinks	319
Hotels		sizes of ranges	317
air for ventilation	358	steam and gas	317
hot water requirements	341	steam pressures, used by	324
Human comfort	367	steam requirements for	324
effect of relative humidity on	377	steam supply connections	326
Humidifying		steam tables	319
definition of	395	types of dish washing machines	321
Humidity	362	vegetable peelers	320
control in fan furnace heating	190	water connections	326
effect of, on heat transmission	75		
readings	363	L	
relative	4	Latent heat	373
temperature, and air motion	367	Laundry equipment	
		arrangement of equipment	316
I		equipment	312
Ignition systems for oil burners	222	flat work ironers	314
Illumination in federal buildings	351	machines	311
Indirect heating system		pipe sizes and systems of piping	315
quantity of air to be circulated in	381	steam pressure required	315
Induced draft		systems, piping	315
induced draft fan	166	tumbler dryers	314
where used	166	typical layout	312, 313
Industrial oil burning		washing machines	312
air atomizing burners	228	water softening	316
air for combustion	229, 230	water, steam and power requirements	314, 315
auxiliary apparatus	231	Layout of kitchen for hospital	323
continuous circulation system	232	Layout of kitchen for hotel	325
domestic and	219	Leaders	
draft	230, 231	heat carrying capacity of pipe	169
furnace combustion volume	230	sizes	169, 171
mechanical atomizing	228	sizes of straight	170
oil meter	231	temperature drop in	170, 171
selection of	230	Loss	
steam atomizing	228	areas of heat	46
strainers for	231	calculating heat	3, 4
tanks for	231	calculation of heat, from uninsulated surfaces	247
Industrial uses of ozone	448	calculations for heat transmission	46, 47
Infiltration		heat	252, 253, 254, 255, 256
calculations for	59	heat, computations	4, 5
determination of air leakage	48, 49	heat, from bare fittings	252, 258
due to temperature difference	59	heat, from buildings	3, 169
effect of storm sash on	58	heat, per unit area from flat surfaces	247
heat allowance for	48, 55	of heat in B.t.u. of bare pipe	247, 248
through steel window	50, 55	of heat in money and coal	247, 249
through metal windows	50, 52	total body heat	367, 368
through walls	50, 53	Low temperature drying	453
through wood windows	50, 51, 55, 56	low voltage systems of oil burner control	223
values in tables	55		
weatherstripping and	56, 57	M	
Insulation		Mains	
chart to determine thickness of	255, 257	return	80
conductivities	251, 252, 253	sizes of hot water	342
determination of thickness	251	sizes of water supply for apartment houses	338
economic thickness of	253, 255, 258	sizing of	336
economic thickness of underground	256	supply	80
effect of air velocity on surface losses	254, 257	transmission	87
heat, for pipes and surfaces	247	Maintenance of exhaust system	470
purpose of, cold surfaces	251	Marine hospital dining rooms	353
Intermittent dryers	451	Maximum water temperature in hot water	
		heating systems	116, 117, 118
K		Mechanical draft	159, 456
Kata—thermometer	366	burner	162, 163
Kitchen equipment		difference in pressure required	160
broiler	321	firing	159
cereal cookers	319	forced draft	159
coffee urns	319	grates for various fuels	159
cook's table	318	induced draft	159
diet kitchens	322	mechanical draft fans	162
dishwashing sink	321	over-feed stokers	161
