CONSULTING: ULTRAMICROANALYSIS • MICROSCOPY • SMALL PARTICLE PROBLEMS • SOLID-STATE CHEMISTRY

3 June 1977

Ms. Regina Gallagher
Research Center
Johnson & Johnson
501 George Street
New Brunswick, New Jersey 08901

Dear Ms. Gallagher:

We have examined a sample of talc designated as "B" using the transmission electron microscope and selected area electron diffraction. We find this sample to be completely free from asbestiform minerals. There are, however, some fine ribbons of talc.

Thank you for consulting McCrone Associates and if you have any questions concerning this analysis, please contact us.

Yours sincerely,

Gene R. Grieger
