I have to present the entire subject rather objectively. The plant may or may not wish this but from the standpoint of a physician, there is only one way in which I can do it, as I hope you can appreciate.

Yesterday I read that the AIA (Asbestos Information Assoc.) which Erich Feierabend is active in, has available through Johns-Manville a 16mm. film and 35mm. slides on "Working with Asbestos." From the brief description provided, it appeared this was general information on Asbestos for the rank and file employees. I wrote yesterday to the AIA for information regarding the film and slides. It is entirely possible that this might answer much of any need for the same by the Friction Products Group in Winchester. I would like to preview it and afterwards see what I feel would be best.
