SUBJECT: Respiratory Protective Program

Per our discussion on July 19, 1979 to improve the Respiratory Protective Program for the High Pressure Laboratory. I suggest we should do the following:

1. Install a Scott Air Pak in each Control Room for emergency use only.
2. Remove fresh Air Masks from their Cell location.
- *3. Install boxes in each Control Room to house masks and hose.
4. Install an Air outlet in South Control Room.

*When work is to be in progress where fresh air is needed, the employee would take a mask and hose to the work site and then return the equipment to its proper box when he has completed his job.

I feel this would protect the equipment and upgrade the protection given to the employee.

Carmelita
