A Germ of a major strategy here.

Q What did you mean by that?

A Well, this apparently refers to a previous memorandum which I don't think I have seen. It isn't in your file, is it?

Q This memorandum?

A That is 7-42 on strategy for '42. It must have been that, major strategy. That is what you are asking about.

Q Yes.

A I was aware, as I think many at Owens-Corning were aware, of the fact that there was a danger of asbestosis that resulted from exposure to asbestos fibers in plants where it was fabricated and manufactured and that there was apparently unexplored literature in the field and that we might do well to compile a file on this just to have it handy in case we might want it for a defense mechanism against competitive activity that would be -- that might represent an attempt to smear fiberglass when they were not lily white themselves.
