INTERCHEMICAL CORPORATION
MEDIUM YELLOW

I am getting a little worried about our ability to keep ahead of or equal to Imperial on lightfastness of Chrome Yellows. This property has been mentioned more and more during the past year. Mr. Headley's report of 7/5 on Elizabeth call, indicates that Imperial might have an offering equal to Y-465-D but with the low reactivity of Y-562-D. I've heard nothing of this here but will try to develop some information.

In the meantime, I suggest this matter be given some thought as to what we can do even if Imperial doesn't come up with a suitable product.
