Section Test :8

Lab Familiarization Area Hazards

Answers:

- Describe the hazards associate with strapping storage tanks.**
Storage tanks are padded with nitrogen. Asphyxiation is a concern here.
- Describe the hazards associated with removing pigs from pig traps.**
If the trap is not bled down properly, using the check sheet, the pressure and pig will be released upon opening the pig trap door.
- State what special piece of safety equipment is required in addition to basic safety equipment when working on a barge or ship.**
A life jacket is required on barges only.
- Explain what safety devices are available to you in the loading areas.**
Safety showers, fire hydrants, deluge guns and fire extinguishers, emergency shutdown switches for loading pumps and solenoids.
