Subject Interpretation of the OSHA Vinyl Chloride Standard

FU
4/21/76
JAL
Results of meet.

On Friday, April 2, I plan to meet with an industry group who will discuss problems, solutions, interpretations, improvements, etc. of the OSHA vinyl chloride standard. I plan to bring up our concerns about

1. Respiratory protection
2. Regulated areas
3. Handling outside contractors
4. Using fixed point monitors in place of dosimetry
5. What constitutes "massive release"?

Please let me know of any other subjects that you would like a "What's the industry doing?" opinion about and what subjects we might ask OSHA to interpret for us.
