N-11400

The attached letters indicate that we may be able to expand the scope of the study on the health of lead workers to a size that will give us a good sample population.

At present Dr. Pell and I are going through a pilot group of medical records to make sure we are asking the right questions in the right way so that the data processing will go smoothly.

The mechanics of the study are now worked out and the data collection is now in process. This begins with the documentation of each man's period of lead exposure and then the records will be passed to Dr. Pell and me for the addition of the medical information.

Mr. Kurt Raht, Research Engineer  
Research and Development Division  
The Consolidated Mining and Smelting  
Company of Canada Limited  
Trail, B. C., Canada

Dear Kurt:

I appreciate very much having the cooperation of COMINCO as you expressed it in your letter of December 21. Since the Dupont medical people have broached this idea originally, I am sending a copy of this letter to Dr. Stopps at their Haskell Laboratory and asking him to write you with his ideas as to what information will be needed.

My best wishes to you for a happy and prosperous 1965.

Very truly yours,

Don G. Fowler

Dear Jim:

The Consolidated Mining and Smelting Company of Canada Ltd. is a very large lead producer and has responded, through Mr. Raht, to my request for cooperation in a medical study of lead workers. Mr. Raht has asked what the ground rules for the study will be and I would appreciate your writing to him and giving him your thoughts on the matter.

Very truly yours,

DGF:md

DON G. FOWLER  
DIRECTOR OF HEALTH AND SAFETY

December 23, 1964

Max Johnson, M. D.  
The Broken Hill Associated Smelters Pty., Ltd.  
Port Pirie, South Australia

Dear Dr. Johnson:

Our friends at the duPont Company feel that the lead industry could perform a valuable service by making available to the medical profession certain health records covering employees who have had a long-term industrial exposure to the metal and its compounds. Dr. Stopps has been designated as coordinator of this effort for duPont and, I understand, is now gathering the necessary health records for employees whose exposure has been to tetraethyl lead. Jim Hopkins advised me that you have also such a project underway which concerns itself with employees whose exposure has been to inorganic lead. The duPont people would be most interested in coordinating their efforts with yours to the end when a publication of the results could be made in some appropriate fashion.

If you agree with this as a general proposition would you kindly correspond with Dr. Stopps? His address is:

G. J. Stopps, M. D.  
Haskell Laboratories  
E. I. du Pont de Nemours  
Wilmington 98, Delaware

By a copy of this letter to Dr. Stopps I am advising him of your interest.

I am enthusiastic about such a project and feel that the results will be valuable in covering both organic and inorganic lead exposures.

Very truly yours,

Don G. Fowler
