

Course Prerequisites

All students must have completed the first three courses in the curriculum prior to enrolling in this course. Students who do not show passing credit in their STARS planners for the previous courses should not be admitted to this class. Their presence will slow down the course flow, as well as monopolize valuable instructor time.

- Global Fundamentals Brake System Web-Based Training
- Vehicle Brake Systems Web-Based Training
- Brake Service Procedures Web-Based Training

Evaluation

Each technician attending this course will be required to pass a combination hands-on/written evaluation. This will be administered on the afternoon of the second day. The hands-on evaluation is a pass/fail type.

- Hands-on evaluations will be conducted with exercises in:
 - brake system diagnosis
 - brake system service
 - service publication CD-ROM/DVD navigation
 - special tool usage

In order to pass the course, you must demonstrate acceptable skills at the evaluated hands-on exercises AND you must answer at least 80% of the written post test questions correctly.

Student Guide

The Student Guide contains the worksheets used at the workstations for each of the two days. You must complete each worksheet.

IMPORTANT: Actively participate in exercise reviews. This is your opportunity to ask questions and clear up any areas that you may not fully understand.
