R. A. Lidgett
Monsanto Ruabon

The column for the proposed ASTM method for high boilers in 1016 is fifty foot by 0.02 inch ID SCOT coated with FFAP Perkin-Elmer Part No. 008-0804. We are air mailing to Doug Casey the procedure and four 1016 samples that we have thoroughly analyzed by both the above procedure and the high resolution GC-MS procedure.

We have now made a second polyimide wall coated capillary 200 foot by 0.02 inch ID which continues to give less overlap of tetras and pentas and to be more durable than FFAP. Two polyimide SCOT columns bought from P-E were not good. (Continued)
