29th July, 1960.

The Branch Secretary,
Australian Workers' Union,
17-19 James Street,
PERTH.

Dear Sir,

I have to acknowledge your letter of the 22nd
July, 1960.

One of our officers has recently completed a
ventilation survey of the mine and mill and his report is
expected very shortly.

It is appreciated that the ventilation of the mine
and dust suppression in the mill are difficult problems.
Regular visits of inspection will be made and dust counts
will be taken.

The question of the methods to be employed in
investigating the dustiness of the air is being discussed
at the present time.

We have considerable faith in the Konimeter which
we have been using for many years but other methods are
being investigated.

Yours faithfully,

~

(A.H. Telfer)
UNDER SECRETARY FOR MINES
