

July 14, 1971

5-YEAR LEAD STUDY

Technical problems were encountered in the lead analysis of blood samples from the subjects listed below. We would like to obtain repeat blood and urine samples from as many of these subjects as possible before the end of 1971. Special labels for these repeat samples are enclosed.

We are sorry for the inconvenience to you and the subjects, but since this is the final year of the lead study it is important to have the data as complete as possible.
