SUBJ: BENZENE CONTENT OF ALCL_3 LIQUOR

VISTA

I've reviewed the data you sent on 11/29 and discussed the measurements with Bill Maxon. It appears that the sampling times for the two measurements taken were significantly different and the results for similar loadings were highly variable. The data obtained is not sufficient to make a decision regarding potential exposures to benzene when handling this product and the need for appropriate product warnings.

I would request that more area sampling be done with particular attention to sample duration. I've talked to Bill Maxon about this issue and by copy of this letter am requesting his help in obtaining the needed measurements.
