U.S. NAVY: HYDRAULIC FLUIDS

Attached is a suggested letter to Captain Bennet discussing the composition and toxicity data for Pydraul 150. Because of the references to composition and because the letter is addressed to the Bureau of Ships rather than the Bureau of Medicine, perhaps the letter should be sent from your group rather than from the Medical Department.

I think it would be desirable for you to send a copy to the Bureau of Medicine but leave that up to you in view of the composition statements.

Elmer P. Wheeler
