Cost Per Ton Statement

After reviewing the Pipe Division's first quarter actual cost per ton report, we note that we may be doing something opposite of what we should be doing.

(1) We have been taking the $3.00 per ton for storage credits out of the costs and adding it back on in the other costs not included above line.

(2) On this above line, we are adding the inbound freight, warehousing and price variation on finished goods for resale. For the first quarter these costs were $6060 fire storage credit, $349 inbound freight, $17888 warehousing and $3343 favorable price variation. This total of $20954 is the $2.47 per ton shown on the quarterly reports and new costs per ton report.

Since April was the last month for the fire storage credit, may we suggest that the $3.00

871

be taken out of the new cost year to date and not show it any more so for the balance of the year. This would then show the actual cost per ton shipped for the year to date.
