St. Louis 66, Mo.

Gentlemen:

We are manufactures of full facepiece gas masks and from time to time receive requests for protection against materials that are proprietary and we are not sure what they contain.

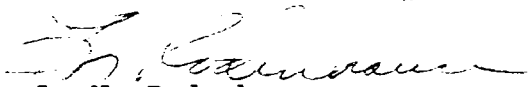

This time our request is for protection against your hydraulic fluid Pydraul A-200. It is used, as the information is given to us, in diecasting machines and when it is heated vaporizes.

We would greatly appreciate knowing what group of vapors and what the break down products are when this material is heated. We could then recommend the proper protection for those who are exposed to these materials.

Thank you.

Sincerely yours,

ACME PROTECTION EQUIPMENT CO.
