and the person has the option to invest that money. And if they invest that money and use a portion each year, the value of the investment from the year 1993 to the year 2001 would be $228,167.

Q Okay. Thank you, Doctor.

A Now there is the issue of the household services losses as well.

Q Well, maybe before we move to that, can I ask you just briefly what were some of the assumptions that you had to rely on to ascertain those figures you just wrote down?

A Okay. There are a number of assumptions. One assumption deals with the fact that he would work until he retired at the end of age 64 or to each the age 65.

Another assumption would be that he would have, in fact, been alive during that period, and we rely on life expectancy data from the Federal Government.

There are publications that suggest what the potential life expectancy and in the case of Mr.
