NEW YORK 17, N.Y.

June 30, 1961

SUBJECT: STATE HIGHWAY
BRIDGE RECONSTRUCTION
L.I.A. 2500 SERIES

To Members of the Lead Pigments Technical Committee:

I have prepared the attached list of the experimental applications of the paints in L.I.A. No. 2500 Series, by State Highway Departments and others on bridges, compiled from correspondence in our files.

I have no information available to me that definitely states that these experimental paints were used on any of these projects. However, if you or any of your associates would check on these the next time they call on these highway departments and let me know what has developed, it will be appreciated.

I will in turn inform the Committee as to whether or not these experimental paints were definitely tested and what the results are.

Sincerely yours,

David M. Bortina
David M. Bortina
