information**

Summary

We have attempted, in this booklet, to provide answers and advice on the problems which many industries, requiring asbestos in daily use, have to face.

While it should not be treated as a complete statement of current regulations, it gives the best guidance at present available, based on authoritative medical opinion, the wide experience of the asbestos industry, and the numerous publications devoted to the subject.

If you have any need of advice, literature or further information get in touch with:-
