Dear Bob:

I have been asked on several occasions recently questions as to the effects of pentachlorophenol when the compound is used for various impregnations. Have you any field studies or data on humans which might supplement the papers by your laboratory which have appeared previously, such as in our Journal 1943, p. 192 and Journal of Pharmacology, Vol. 76, p. 104. Can you refer me to users who might give this information if you do not have it?

Sincerely yours,

Philip Drinker
