J. Cassulo, M.D.
General Medical Director

February 16, 1973

MR. P. G. MATT, JR., General Manager
Corporate Engineering and Quality
Assurance
222 Broadway

This is to supplement my letter to you of September 9, 1972, (see attached) in which I recommended that the Company use substitutes for asbestos in lieu of asbestos where feasible and practical.

Attachment 2 is a copy of the results of a recent survey I conducted of our medical directors on potential asbestos exposure.

I continue to be concerned and trust that substantial progress has been made toward reducing and eliminating the purchase and use of asbestos in all applications including construction of new plant and facilities, the maintenance of existing plant and facilities, and the manufacture, installation and repair of products.

You may wish to communicate my concern to the appropriate AIA and BTL organizations.

J. Cassulo M.D.
