March 4, 1987

Thomas W. Henderson
Henderson & Goldberg, P.C.
1030 Fifth Avenue
Pittsburgh, PA 15219

Dear Mr. Henderson:

Thank you for referring Raymond H. Stumpe, Jr. to me for evaluation.

Based upon these records, it is clear that Mr. Stumpe had a significant exposure to PCBs during his entire working lifetime. He also had some history of exposure to microwave radiation and to sheet rock which may have contained asbestos.

In addition, he worked for a brief period of time in a Reynolds metal plant where aluminum reduction took place. Aluminum production plants characteristically have high levels of polynuclear aromatic hydrocarbons present.

Mr. Stumpe frequently worked inside various transformers and cleaned out transformer oil sludge by hand. He utilized a solvent, the precise nature of which has not been characterized.

In 1982, at age 36, Mr. Stumpe developed carcinoma of the colon. There was a significant family history for carcinoma of the colon in his father and his paternal grandfather. A paternal aunt is also said to have had carcinoma of the colon.

In view of the fact that Mr. Stumpe had a history of exposure to chlorinated hydrocarbon solvents, dust which probably contained asbestos, fluids which undoubtedly contained polychlorinated biphenyls, and air which contained polynuclear aromatic hydrocarbons, it is more probable than not that these substances together caused or contributed to the occurrence of his carcinoma of the colon.

Mr. Stumpe's strong family history of carcinoma of the colon suggests that he was more prone than the average individual to this disease. However, in such an individual exposure to materials with known carcinogenic propensity such as polychlorinated biphenyls, asbestos, and polynuclear aromatic hydrocarbons are very much more likely to have caused his disease than any unknown or idiopathic factor, especially at Mr. Stumpe's young age.

Central: 701 E. Colfax, Denver 80203 • 831-7171

East: 9450 E. Mississippi, Denver 80231 • 751-1241

Page - 2 -

It is my opinion that Mr. Stumpe's exposure to polychlorinated biphenyls caused or contributed to his fatal carcinoma of the colon.

I trust this information will be useful to you.

Sincerely,

Daniel T. Teitelbaum, M.D
