Lead Hygiene - Baton Rouge Plant

April 30, 1946

I have received a memorandum dated April 21, 1946 from Dr. Kehoe, covering various matters of interest in connection with his inspection trip to the TEL area at Baton Rouge on April 5th.

I am pleased to note that Dr. Kehoe finds a general improvement in the state of cleanliness and maintenance as compared with recent previous conditions. This is a welcome report of progress.

However, there do seem to me to remain certain faults that should not be difficult to remedy or correct and I urge both of you to improve upon those faults which were outlined in the report.

I was particularly disturbed about some of the comments made on the condition of the Blender and especially, the occasions of the procedure followed in repairing the ethylene dibromide pump.

I would appreciate having a progress report from you gentlemen in due course as to the corrections made to the criticisms of Dr. Kehoe.

J. H. Schaefer
