Lead Inspector:				
Cameron Tanaka	Cameron Tanaka Digitally signed by Cameron Tanaka Date: 2024.07.25 23:15:20 -04'00'			07/25/2024
	ERG	Cameron.Tanaka@erg.com		(703) 633-1632 ext. 11632

SECTION I – INTRODUCTION**Site Entry and Purpose of the Inspection**

Type of inspection: Focused Compliance Inspection (FCI)

The Port of Houston and surrounding facilities were selected for inspection based on an Environmental Justice and Regional initiative to evaluate facilities at ports receiving or transporting Resource Conservation and Recovery Act (RCRA)-regulated hazardous wastes, and/or have an International Convention for the Prevention of Pollution from Ships (MARPOL) Annex V Certificate of Adequacy (COA) issued by the U.S. Coast Guard (USCG).

This report is based on information supplied by the facility representatives, inspector observations, port related facilities, and records including photographs taken (see Appendix 1), verbal or written statements made during or after the on-site inspection, and/or materials shown, demonstrated, or submitted to the EPA during or after the on-site inspection. In addition, information gathered prior to or after the inspection from a review of EPA, State, and public records may be included in this report.

Facility General Description

Tenant/Area	Inspection Date	Process Description	Area of Concern
CIMA Services LP	05/10/24	CIMA Services LP (CIMA) is a transport company that operates as a transporter and transfer facility at this location. They have an administrative office, a laydown area for storing equipment, and mechanic shops on this site. They occasionally will store hazardous waste drums on site as a transfer facility for no longer than 10-days. In general, however, they do not bring any material back to this facility. CIMA does not have a MARPOL COA.	Yes

SECTION II – OBSERVATIONS

Tenant: CIMA Services LP			
Section: 2.1	Date: 05/10/24, 8:45 AM	Contains AOC: Yes	Contains CBI: No
Lead Inspector: Cameron Tanaka	Attendees: Shane McCauley (Safety/Training) and Melissa Schepsnaide (Environmental)		
CIMA is located in Pasadena near the Vince Bayou River and operates as a transporter for hire. The company serves as an end-to-end transporter and uses tankers for transport (EPA ID TXR000081245). This location is split into two sections: an administrative office, and the laydown area to store tankers, forklifts, dirty equipment, and any drums received as part of deliveries. After completion of deliveries, tankers will proceed to third parties for washouts and servicing. Mr. McCauley stated that the facility does not generate hazardous waste but does occasionally generate used oil and paint waste. When the inspection team inquired about reception of hazardous waste drums, Ms. Schepsnaide stated that the drums typically stay on-site for roughly two days. CIMA does not have a MARPOL COA. The inspection team then performed a visual inspection of the facility. Observations and Areas of Concern (AOCs) are discussed below along with facility responses where relevant. During the inspection, the inspection team observed CIMA’s laydown area. The facility did not have either used oil or any hazardous waste drums onsite at the time of the inspection. However, CIMA did have paint waste. While inspecting the paint waste area, the inspection team observed three non-empty 55-gallon drums that were improperly labeled, and one of the three drums did not have a lid (see Appendix 1 – Photos 1, 2, and 3) <u>AOC #1</u> – CIMA did not clearly label containers used to store waste paint with the words “Universal Waste: Paint and Paint Related Waste” - 30 TAC 335.262(c)(2)(F); <u>AOC #2</u> – CIMA was storing waste paint in open containers - 30 TAC 335.262(c)(2)(A)]. In her first follow-up email (see Appendix 2), Ms. Schexsnaider included photographs of the paint waste storage area, depicting that all the containers were labeled and sealed properly (see Appendix 4). The inspection team did not observe other AOCs at the time of the inspection. A closing conference was conducted at approximately 9:45 AM with Mr. McCauley and Ms. Schepsnaide. The AOCs were communicated during the closing. During the closing conference, the inspection team requested documents from CIMA, which Ms. Schepsnaide provided as attachments to her two follow-up emails from May 17, 2024 (see Appendix 2 and Appendix 3). The requested documents and their associated appendices are listed as follows: • CIMA’s spill response plan (see Appendix 5 and Appendix 6); • Documentation of CIMA’s most recent spill response (see Appendix 7); • CIMA’s hazardous waste manifests for April 2024 (see Appendix 8); • CIMA’s most recent transfer manifests (see Appendix 9). The ERG inspection team noted no issues with the documentation provided.			

SECTION III – RECORDS REVIEW

No RCRA regulated records were reviewed during this focused onsite inspection.

SECTION IV – APPARENT AREAS OF CONCERN

The presentation of Area(s) of Concern does not constitute a formal compliance determination or violation.

Tenant: CIMA Services LP		
AOC #1 – CIMA did not clearly label containers used to store waste paint with the words “Universal Waste: Paint and Paint Related Waste.”	Citation: 30 TAC 335.262(c)(2)(F)	Section: 2.1
AOC #2 – CIMA was storing waste paint in open containers.	Citation: 30 TAC 335.262(c)(2)(A)	Section: 2.1

SECTION V – FOLLOW UP**Follow-Up**

Any facility follow-up items are as discussed in each facility’s observations in Section II. Documents or files provided by the facilities were transmitted via email and included responses to AOCs or provision of documents requested.

Communication Log

During and after the inspection, additional information was emailed to EPA including:

1. 05/17/24 CIMA email #1 – Melissa Schexsnaider sent spill response documents and photographs of corrective actions implemented at the facility.
2. 05/17/24 CIMA email #2 – Melissa Schexsnaider sent CIMA’s most recent transfer manifests and copies of their RCRA hazardous waste manifests for April 2024.

Good Afternoon,

Documents and pictures for the following are attached. Our manifest files are large so I'm sending them on a separate email. Please let me know if you have any questions or need any additional information.

- Your Spill Response Plan
- Documentation of your most recent spill response
- Waste paint drums were not labelled as universal waste and the lid for one of them was not secured

Thank you,

Melissa Schexsnaider

Some people who received this message don't often get email from cameron.tanaka@erg.com. [Learn why this is important](#)

Hello all,

I am following up with a list of items and notes from our inspection today. We would like you to send us:

- Your Spill Response Plan
- Documentation of your most recent spill response
- Hazardous waste manifests for April 2024, including hazardous waste transfer manifests

Additionally, we had the following observations. If you have any responses, clarification or documentation of corrective actions, we ask that you provide those to us as soon as possible, and we will incorporate those into the report (ideally within two weeks to be included in the report).

- Waste paint drums were not labelled as universal waste and the lid for one of them was not secured

Again, thank you for taking the time out of your day to meet with us. Please let us know if you have any questions or concerns. Any follow-up can be sent to myself, and the persons attached.

Best,
Cameron Tanaka (he/him)

APPENDIX 5.
CIMA SPILL PREVENTION & RESPONSE PROGRAM

 CIMA Services, L.P. <i>A Full Service Industrial Company</i>	Cima Services, LP Safety Management System		Doc No:	CSM-036
			Initial Issue Date	05/11/2011
			Revision Date:	08/30/2023
Spill Prevention & Response Program			Revision No.	2
			Next Review Date:	08/30/2026
Owner: Dion Schoening	Approver: Matt Taylor	Issuing Dept: Safety	Page:	Page 1 of 5

Purpose

The purpose of this program is to inform interested people, including personnel that Cima Services, LP. is complying with requirements for preparing and maintaining a Spill Prevention plan by providing a written plan that describes the equipment, manpower, procedures, and adequate countermeasures for preventing and controlling spills.

Scope

This program applies to all work operations at all sites where personnel may be exposed to potential spill situations under normal working conditions or during an emergency.

Responsibilities

Supervisors shall inform all applicable personnel of the equipment, manpower, procedures, and steps to prevent and control a spill. Supervisors shall also encourage any suggestions that Cima Services, LP personnel have for improving the Spill Prevention program, to strive for clear understanding, safe behavior, and involvement in the program from every level of the company. Cima Services, LP. is committed to developing and maintaining an effective and comprehensive program.

Cima Services, LP. shall implement proper planning and preventative measures to minimize the likelihood of spills, and to clean up spills quickly and successfully should they occur. Good housekeeping practices shall be followed with clean and organized storage labeling and secondary containment.

Authorized Personnel are personnel who are designated to handle fuel, lubricants, or other regulated substances and ensure cleanup is accomplished in accordance with applicable agency regulations and requirements. Applicable personnel shall be briefed on procedures to respond to a spill during training.

 CIMA Services, L.P. <i>A Full Service Industrial Company</i>	Cima Services, LP Safety Management System		Doc No:	CSM-036

Spill Prevention & Response Program			Revision No.	2
			Next Review Date:	08/30/2026
Owner: Dion Schoening	Approver: Matt Taylor	Issuing Dept: Safety	Page:	Page 2 of 5

Spill Kit Equipment

Cima Services, LP. must maintain spill kits containing sufficient quantities of absorbents and barrier materials to adequately contain and recover foreseeable spills. Spill kits should include, but are not limited to the following:

- Absorbent pads,
- Straw bales,
- Absorbent clay,
- Sawdust,
- Floor-drying agents,
- Spill containment barriers,
- Plastic sheeting,
- Skimmer pumps,
- Holding tanks,
- Goggle,
- Gloves.

Equipment shall be located near fuel storage areas and other locations as necessary to be readily available to control foreseeable spills.

Designated personnel shall perform inspections and test equipment to ensure that it is in good repair. Designated personnel shall regularly inspect hoses, pipes, valves, and tanks to ensure equipment is free of leaks. Any equipment that is leaking or in need of repair shall be immediately removed from service and repaired, prior to resuming work.

All construction equipment (i.e., forklift, MEWP, earth moving equipment, etc.) shall have a condensed spill kit attached or immediately available to the operator of said equipment. The spill kit should consist of at a minimum but not limited to the following:

- Absorbent pads,
- Goggles,
- Gloves,
- Spill containment barriers.

 CIMA Services, L.P. <i>A Full Service Industrial Company</i>	Cima Services, LP Safety Management System		Doc No:	CSM-036

Spill Prevention & Response Program			Revision No.	2
			Next Review Date:	08/30/2026
Owner: Dion Schoening	Approver: Matt Taylor	Issuing Dept: Safety	Page:	Page 3 of 5

Fuel Storage

Cima Services, LP. shall ensure the following proper fuel storage practices are followed:

- Proper signage at and adjacent to fuel storage areas to include “Fuel Storage Area- No Smoking within 50 ft.”
- A minimum of a 20lbs. fire extinguishers must be located and readily available at all fuel storage locations. The extinguishers shall be located no less than 25 ft and no more than 75 ft from these locations.
- Tools and materials to stop the flow of leaking tanks and pipes shall be kept on site.
- Fuels, lubricants, waste oil, and any other regulated substance shall be stored in aboveground tanks only.
- Storage tanks and containers must conform to all applicable industry codes.
- A suitable secondary containment structure must be utilized at each fuel storage site.
- Secondary containment areas must not have drains. Precipitation may be drawn off as necessary.

Refueling

- Fuels must be dispersed during daylight hours only.
- Fuel dispensing operations shall always be attended by Authorized Personnel. Personnel must be stationed at both ends of the hose during fueling unless both ends are visible and are readily accessible by one person.
- Refueling shall take place in upland areas that are more than 100 feet from wetlands, streams, and water bodies (including drainage ditches), and water supply wells.

Initial Spill Management

Upon immediately recognition of any fuel, oil, hazardous material, or other regulated substance spill, or upon learning of conditions that shall lead to an imminent spill, personnel discovering the situation shall:

- Initiate actions to contain the fluid that has spilled or is about to spill, and initiate action to eliminate the source of the spill to the maximum extent that is safely possible.
- Notify the crew supervisor and provide the following information:
 - Location and cause of the spill,

 CIMA Services, L.P. <i>A Full Service Industrial Company</i>	Cima Services, LP Safety Management System		Doc No:	CSM-036
			Initial Issue Date	05/11/2011
			Revision Date:	08/30/2023
Spill Prevention & Response Program			Revision No.	2
			Next Review Date:	08/30/2026
Owner: Dion Schoening	Approver: Matt Taylor	Issuing Dept: Safety	Page:	Page 4 of 5

- Type of substance that spilled,
- Whether the spill has reached or is likely to reach any surface water.

Upon recognition of a spill or a potential spill, the supervisor or Authorized Personnel shall:

- Assess the situation and determine the need for further action,
- Direct subsequent activities and further assign responsibilities to other personnel,
- Notify management and if needed applicable authorities for assistance.

Cima Services, LP. shall report spills to the appropriate federal, state, and local agencies as soon as possible. Additionally, Cima Services, LP. is responsible for ensuring that all cleanup activities required by a jurisdictional agency are satisfactorily met and in compliance.

13.0	-	Emergency Phone Numbers and Response Contractors
Appendix	-	Emergency Notification Report Emergency Response Coordinator Notification List Emergency Response Companies State Notification List

1.0 PURPOSE

CIMA Services, L.P. is an acknowledged leader in waste transportation. As a leader in our field we have developed a Spill Prevention and Contingency Plan to respond to any transportation emergency should one occur.

This plan is designed to facilitate a quick and effective response to a transportation emergency involving a hazardous material or hazardous waste. In addition, this plan satisfies the basic response plan requirements of 49 CFR Part 130 by establishing incident mitigation procedures for an emergency involving a petroleum oil transported in bulk packaging.

2.0 SCOPE

The CIMA Services Transportation Emergency Response Plan provides a mechanism for effectively responding to a transportation incident throughout the continental United States. The plan encompasses the entire chain of events surrounding an incident, beginning with initial notification and preliminary containment operations and progressing through clean up activities and remedial actions.

A copy of this plan must be maintained at our principles place of business and at each location where dispatching of motor vehicles occurs. It must also be kept in the cab of each motor vehicle transporting a hazardous material, hazardous waste, or petroleum oil.

3.0 EMERGENCY RESPONSE PERSONNEL

- 3.1 **Driver** – the operator of the motor vehicle involved in the emergency.
- 3.2 **First Responder (awareness level)** – witnesses or discovers a release of a hazardous material and who is trained to notify the proper authorities.
- 3.3 **First responder (operation level)** – responds to releases of hazardous materials in a defensive manner without trying to stop the release.
- 3.4 **Hazmat Technician** – responds aggressively to stop the release of hazardous materials.

- 3.5 **Hazmat Specialist** – responds with and in support of hazmat technicians, but who have specific knowledge of various hazardous materials.
- 3.6 **Incident Commander** – assumes control of the incident scene beyond the first responder awareness level.
- 3.7 **Emergency Response Coordinator** – the Company employee contacted from the Emergency Response Coordinator Notification List who must determine the level of response needed and employ the resources necessary to effectively mitigate the transportation emergency.

4.0 TRAINING AND CERTIFICATIONS

All Company emergency response personnel must, as a minimum, have the following:

- 4.1 **Completion of 24 or 40-hour training in accordance with 29 CFR 1910.120(e) or (p).**
- 4.2 **Current certifications of medical qualification.**
- 4.3 **Current certification of fit test for respirators used.**
- 4.4 **Current annual 8-hour refresher training.**

Training requirements for the following personnel are tiered. This means the training requirements are cumulative for each successive level. The descriptions below merely summarize the required specialized training. For determining actual training requirements content, refer to 29 CFR 1910.120(q)(6).

4.5 First Responder – Awareness Level

Training is targeted at teaching personnel to recognize the human hazards present during these emergencies and how to protect themselves against such hazards. The required training also includes how to accurately and fully report the necessary information to the proper agencies so that subsequent emergency responders are fully informed.

4.6 First Responder – Operations Level

In addition to all of the above training, personnel must be training to prepare them to respond to a release in a defensive manner from a safe distance without actually trying to stop the release. This includes training in containment methods such as diking, ditching,

and use of absorbent material or drip pans; activities that do not require chemical protective clothing.

4.7 Hazmat Technician

In addition to all of the above training, personnel must be trained to assume a more aggressive role than above in that they will approach the point of release in order to plug, patch or otherwise stop the release. They must also receive training to be able to classify, identify and verify known and unknown materials by using field survey instruments and equipment. They must also be training to select and use proper specialized personal protective equipment (PPE). Training also would include methods to perform advanced control, containment and/or confinement operations within the capabilities of the resources and PPE available.

4.8 Hazmat Specialist

In addition to all of the above training, personnel are trained to serve as the most senior and knowledgeable member of the hazmat team. They must receive training which will provide the necessary skills and knowledge to include (1) how to implement the emergency response plan developed under SARA Title III, (2) how to develop a site safety and control plan, (3) how to properly use and calibrate field instrumentation (such as multiple organic vapor analyzers and photoionization detectors), and (4) an understanding of the emergency response portions of the state response plan.

4.9 Incident Commander

The commander level requires at least 24 hours of training at the first-responded operations level, with additional training and experience in how to manage emergency incidents. At a minimum, the additional training is to include (1) implementation of a Company emergency response plan, (2) the hazards and risks faced by responders working in PPE, and (3) how to implement local emergency response plans.

5.0 DOCUMENTATION/FORMS

- 5.1 **DOT Form F 5800.1** – Hazardous Materials Incident Report; to be filed with DOT within 30 days of a hazardous materials incident as defined in 49 CFR 171.16(a), with a copy to the Regional Transportation Compliance Manager.

- 5.2 **Incident Notification Report** – for internal use and preparation of DOT Forms; copy to the Compliance Manager.
- 5.3 **State / Local Notification Reports** - To be completed as required in accordance with state/local reporting requirements; copy to the Compliance Manager.

6.0 SPILL PREVENTION PROCEDURES

- 6.1 Prevention is the first priority. Avoid spills by following safe handling procedures and developing safe work habits.
- 6.2 The dispatcher will get as much information as possible from the customer to be able to select the proper equipment, procedures, and routing for the safe completion of the task.
- 6.3 Check your equipment to insure that it is in a safe condition. **Do not operate unsafe equipment.**
- 6.4 Drive defensively.
- 6.5 It is the driver's responsibility to ensure the vehicle he/she operates is properly equipped to reasonably handle emergencies.
- 6.6 Before leaving on a trip, the driver will:
 - Read and understand all instructions and directions required for the safe performance of the task.
 - Check his equipment to insure safe operations.
 - Make certain he has all required personal protective equipment and that it is serviceable.
- 6.7 In transit the driver will:
 - Obey all Federal, State and local laws.
 - Follow designated routes.
 - Maintain a professional attitude.
 - Check vehicle frequently for leaks or unsafe conditions.
 - Keep ignition sources at least 25 feet from flammable materials.
 - Attempt to keep any spilled materials from going into sewers, drains, or water ways.

7.0 LOADING / UNLOADING

7.1 When unloading material the driver will:

- Supervise the loading of his vehicle.
- Make sure all binders are tightly secured.
- Check the integrity of containers.
- Check for proper markings and labels.
- Check and verify manifests for quantity.
- Install proper placards as indicates on the manifest.
- Secure the load properly for safe transportation to destination.

7.2 When unloading the driver will:

- Wear necessary personal protective equipment.
- Be in attendance at all times.
- Insure that entire contents have been unloaded.
- Make certain that all hazardous material has been washed out of the container and off the ledges of the truck bed.
- Get necessary paperwork signed and retain the transporter copy.
- Contact the dispatcher upon completion of unloading process.

8.0 EMERGENCY RESPONSE PROCEDURES

The primary components of an effective emergency response are:

- Treatment of any injured persons.
- Protection of the health and safety of those in the immediate area.
- Control the scene by keeping unnecessary people away.
- Contain any spilled material.
- Collect and package any spilled material.
- Transport waste material to an approved disposal facility.
- Decontaminate equipment and area.

8.1 Driver Responsibilities

In most cases, the driver of the vehicle is the first person aware of a transportation emergency involving the release of a hazardous material, such as a spill or fire. The time period immediately following the discovery of a hazardous material release is the most critical and will likely determine the overall success of the ensuing

response effort. Therefore, it is vital that the driver possesses a thorough knowledge of the contents of this plan and has been fully trained in the handling of hazardous materials in accordance with 49 CFR Part 172, Subpart H, including first responder techniques.

Upon discovery of a release of a hazardous material, including a hazardous waste or petroleum oil, a driver **must**:

- 8.1.1 Secure the area. Park the unit away from homes, traffic, waterways, or businesses. Keep unauthorized personnel out of the area, using barrier tape if possible.
- 8.1.2 Stay near the vehicle unless he feels directly threatened, or he is ordered to move away by authorities already on the scene. Do not disconnect the trailer unless ordered to do so by the proper authorities or, if by doing so, it will protect the cargo. **Remain upwind from the incident scene at all times.**
- 8.1.3 Set out reflectors or triangles.
- 8.1.4 Protect the manifest and related paperwork. If asked to relinquish, do so only to the proper authorities (see 8.1.7). If forced to abandon the immediate scene, leave the paperwork with the responding authorities. If this is not possible, keep the shipping documents with you, but be prepared to produce them when response authorities arrive.
- 8.1.5 If the severity of the incident warrants notification, contact the local police and fire department via the citizens band radio. If unable to contact either, ask a passerby to notify the agencies.
- 8.1.6 The driver should then contact their immediate supervisor or, if unavailable, the Emergency Response Coordinator (see 8.3) located closest to the incident scene, and provide the following information:
 - The telephone number to establish communications with the scene.
 - Location of incident.
 - Type of incident (leaking drum, overturned tanker, etc.).
 - Quantity of material spilled.
 - Proper shipping name, hazard class, identification number, and packing group of hazardous material.

Include additional description information and RQ designations if they apply.

- Profile number.
- Shipper/generator name, location, and phone number.
- Description of geographic area, including distance to any streams, rivers, or lakes.
- Nature and extent of any injuries or property damage.
- Name of government agencies on the scene.
- Weather conditions.
- An estimate of what level of response will be needed.

If the driver is unable to leave the incident scene to contact their supervisor, they should wait until relieved by the proper authorities and then make the call.

8.1.7 Upon arrival of a representative from the police or fire department, the driver should brief the responding authority regarding the nature of the incident, any actions taken to mitigate it, and allow them to inspect the shipping documents.

8.1.8 Depending on the type and quantity of hazardous materials involved, defensive containment procedures may be implemented by drivers who are trained as first responders (operations level). Defensive containment procedures include the placement of polyethylene, clay absorbent, and absorbent booms around storm drains and access paths to waterways, as well as diking the area surrounding the spill to restrict its mobility.

A driver must not attempt to directly halt the spill or enter a trailer to search for a leaking drum by himself; to do so may result in personal injury or death. Until additional emergency response personnel arrive at the site, only defensive actions as described above should be performed.

8.1.9 Emergency equipment to be kept on board a vehicle transporting a hazardous material, hazardous waste, or petroleum oil must, at a minimum, include (if applicable):

- Citizens band radio or mobile phone
- Skin and eye neutralization solution
- Three emergency reflective triangles or emergency reflectors

- Polyethylene coated tyvek suits
- Safety glasses and eye goggles
- First aid kit
- Hard hat
- Fire extinguisher
- Rubber and leather gloves
- Rubber boots or boot covers
- Barrier tape
- Spill kit, containing (if applicable):

Box/Flatbed Trailer Kit

Salvage drum
Bag absorbent
Polyethylene
Shovel
Broom
Absorbent pads

Cargo Tank Kit

Plastic drum
Bag absorbent
Polyethylene
Shovel
Broom
Absorbent pads
Rubber hammer
Discharge cap
W / gaskets
Spare rupture disc

Due to physical constraints, units designated to transport roll off boxes are excepted from carrying spill kits.

- 8.1.10 It is the driver's responsibility to ensure the equipment listed in 8.1.9 is present and in proper condition for use. Any reusable equipment which has been contaminated through contact with a hazardous material must be decontaminated in accordance with current health and safety procedures.
- 8.1.11 The driver should maintain communications with their supervisor on an hourly basis unless otherwise instructed.
- 8.1.12 The driver should only communicate with properly identified authorities and offer no comment to media representatives.
- 8.1.13 The driver must remain on the scene until relieved by a company employee.

8.2 Initial Notification

Company dispatchers, operations managers, or other management personnel who are contacted by a company driver or representative from a law enforcement, fire, or regulatory agency informing them of a transportation emergency should obtain the information listed in Section 8.1.6. In order to facilitate the recording of this information, an emergency Notification Report Form has been developed and is located in the Appendix.

After recording the details of the transportation emergency, the Emergency Response Coordinator located closest to the incident should be contacted as soon as practicable and all relevant information provided to them.

8.3 Emergency Response Coordinator

The Emergency Response Coordinator is responsible for coordinating the response to a transportation emergency, obtaining all pertinent information regarding the nature of the event, and ensuring that all required notifications are completed.

The list of company Emergency response Coordinators and their corresponding telephone numbers is located in the Appendix.

The initial call to the Emergency Response Coordinator may originate from a variety of sources, including the driver, the driver's immediate supervisor, a representative of a law enforcement agency or fire department, a regulatory official or CHEMTREC.

8.3.1 At some point during or immediately following the initial call, the Emergency Response Coordinator should determine if the Emergency Notification Report Form (Appendix) has been completed. If it has, the report should be faxed or otherwise relayed to the Emergency Response Coordinator. If not, the Emergency Response Coordinator should obtain the information required to complete the report.

8.3.2 The Emergency Response Coordinator should then attempt to communicate with the driver or a response official at the incident site to verify the initial information and obtain a current report of the situation to determine if circumstances have changed.

- 8.3.3 Depending on the nature and extent of the spill or incident, the Emergency Response Coordinator may contact additional Company personnel from the following list:
- General Manager
 - Health and Safety Manager
 - Environmental manager
 - Transportation Manager (if not already apprised)
- 8.3.4 With the assistance of the company personnel listed in 8.3.3 and based on the information provided by the driver, the Emergency Response Coordinator will determine the type and level of response required to address the incident.
- 8.3.5 The Emergency Response Coordinator is responsible for contacting one or more of the emergency response companies listed in the Appendix and dispatching them to the incident site. If it is apparent from the initial call that a major incident has occurred, the Emergency Response Coordinator should activate one of these response companies before making the additional notifications in 8.3.3.
- 8.3.6 After the response company has arrived at the incident site, the Emergency Response Coordinator is responsible for maintaining communications with the supervisor of the response company or incident commander to monitor and coordinate the spill response efforts.
- 8.3.7 In addition to an outside response company, the Emergency Response Coordinator is responsible for ensuring that, whenever necessary and practicable, additional Company personnel are dispatched to the incident site to provide support and to direct the activities of the responders. Upon arrival, these on-scene personnel are responsible for keeping the Emergency Response Coordinator informed of the status of the current situation.
- 8.3.8 A written emergency response and control plan may be required for each response. The plan must include the scope of work, the chemical and physical hazards and the control measures for these hazards. The Emergency Response Coordinator is responsible for assuring proper development and implementation of this plan.

8.4 Incident Mitigation Techniques

The following incident mitigation techniques are designed to halt the release of a hazardous material and, by doing so, reduce or eliminate any harmful effects to the environment. These techniques are **not** intended for use by the driver unless additional support personnel have arrived at the site. All personnel employing these response techniques must be trained in accordance with 29 CFR 1910.120 and 49 CFR Part 172, Subpart H. In addition, they must have donned appropriate personal protective equipment, performed any air monitoring required and, for company personnel, received confined space entry permits, if applicable.

8.4.1 Leaking Drums

Discovery of a leaking drum in transit is usually accomplished by the driver during routine inspections of the vehicle and its load. Often, the released material will be pooled at the rear of the trailer or may be leaking through a seam in the trailer's floorboards.

After discovery of a leak, the driver should institute the defensive response and notification procedures outlined in Section 8.1. Once the appropriate personnel have been notified and additional help has arrived, the following proactive measures should be implemented:

- Locate the leaking drum. Pooling of material at the rear of a trailer does not necessarily indicate that the problem drum is located nearby. The released material may have traveled a substantial distance from the leaking drum to the point where it is first discovered.
- Once the leaking drum has been located, it should be isolated from its neighboring packages. Enough free space should be created to allow full inspection of the drum and provide sufficient work area. Often, this required an additional vehicle into which unaffected packaging can be transferred.
- If the leak is discovered at the top of the drum, this can usually be corrected by either tightening the bung, tightening the ring attachment bolt, or replacing the lid gasket.

- If a hole is discovered at the bottom or side of the drum, the drum should be laid on its side and rolled until the leak is located at the top. A patch consisting of a wooden or threaded plastic plug can be inserted into the hole and, if necessary, held in place with duct tape.
- Once the leak has been repaired, return the drum to the vertical position and with the use of a forklift, winching device or equivalent method, place the damaged drum inside a steel or plastic salvage drum authorized for this purpose by 49 CFR Section 173.3(c).
- Spilled material should be absorbed with a clay absorbent and placed in the salvage drum around the damaged drum to provide additional cushioning and absorbent capability. The salvage drum can then be sealed.

8.4.2 Cargo Tank Releases

Due to the significant volumes involved, the increased threat to human health, and the greater potential for environmental damage, releases from cargo tanks must be dealt with in a quick and effective manner.

After initial discovery of a leak, the driver should park the vehicle in a secure location, notify the proper authorities, and depending on the extent of the release, begin defensive response techniques as described in 8.1.8.

Tank leaks can occur in wither the tank shell, manhole closures or the pipe/valve system. For instance, a slight leak at a valve can sometimes be controlled by fully closing the valve or tightening a screw-on cap. A leak in a discharge or intake line may be controlled by isolating the line and discontinuing the flow of material. If the leak is small, a well-placed bucket may contain the released material.

If a vehicle accident results in a breech or tear in the cargo tank shell, more aggressive techniques will be required to limit the release. If the damage is slight, wooden plugs or golf tees can sometimes be used to plug the hole to reduce or stop the flow until a transfer can be completed. Often, a cargo tank on its side will be leaking from its dome.

In this case, tightening the dome clamps may halt the flow of material.

In more serious situations, the principle objective is to limit the flow and confine the material already released until a second tanker arrives and a transfer of the damaged tanker's contents can be accomplished.

8.4.3 Dump Trailers and Roll Offs

With dump trailers and roll off containers, the rear tailgate seal and the body floor are the areas most prone to leakage. While enroute, the agitation of the material may cause absorbed liquids to separate out and pool at the rear of the unit. If a liner is not used, or it has torn, and the tailgate is not securely fastened, leakage of this liquid may result.

In some instances, tightening the tailgate may alleviate the problem. If not, it may be necessary to move the material away from the rear door, open it to clean out any material preventing a good seal, and a silicone sealant applied before reclosing. An appropriate absorbent material can be added to absorb the free liquids.

If leakage continues, a transfer into a second container will become necessary. Before beginning the transfer, the second box should be lined and a substantial layer of absorbent material placed on top of the liner.

8.4.4 Petroleum Oil Releases

Releases involving petroleum oils and petroleum derivatives, such as solvents, must be managed in a safe and effective manner due to their flammability/explosion potential and the threat they may pose to the marine environment if the spill occurs near a waterway.

A release of a petroleum oil should be managed in accordance with the response and notification procedures outlined in this plan. Additional areas of concern include the following:

- Keep all sources of ignition well away from the scene, including vehicle exhausts, camera and radio equipment, etc.

- Employ grounding/bonding procedures while conducting material transfers.
- Take extra precautions to ensure the spill does not reach a storm drain or access path to a waterway by constructing dikes, berms, etc.

The maximum potential discharge for any vehicle is its maximum capacity. Should a catastrophic failure of a cargo tank occur which results in the discharge of all of its content to a waterway, it is critical the notifications described in 8.1.5 and 8.1.6 are completed as quickly as possible. The designated Emergency Coordinator must then mobilize a response team selected from those listed in the Appendix, which is equipped with containment booms, skimming equipment, pumps, etc. to effectively contain and collect the spill, thereby limiting the subsequent damage to the marine environment.

9.0 CLEAN UP ACTIVITIES

After the emergency situation is under control, site remediation becomes the primary objective. All spilled material and any soil or debris contaminated with the material should be removed and transported to an appropriate disposal facility. The company performing the site remediation will not necessarily be the same company that initially responded – it will depend on the Company's capabilities in this area.

The Emergency Response Coordinator or other designated person will determine if a need for testing exists to ensure the site has been effectively remediated. If so, samples will be taken in accordance with company guidelines and sent to an approved lab for analysis.

10.0 MANAGEMENT RESPONSIBILITIES

If appropriate, these positions and reporting procedures will be followed.

10.1 Transportation Manager or his employee upon notification of a spill will:

- Assume responsibility of obtaining all pertinent information from the driver or the person reporting the incident in order to complete the Preliminary Incident Report.
- Determine if the driver is handling the spill in a professional manner.

- Determine the need for an Emergency Response Team and activate one when required.
- Report the incident, if reportable, to the required agencies within the designated time frame.
- Assist the driver and response personnel with any technical, financial, and supervisory support to manage the spill in accordance with the procedures contained in the Emergency Response Guide.
- Furnish pertinent technical information to the responding agencies to minimize exposure and other hazards.

10.2 The On Scene Coordinator or Incident Commander will:

- Determine the extent of remediation required to restore the scene to an environmentally acceptable condition.
- When there is doubt to the extent of contamination soil samples will be gathered and sent to an approved environmental testing laboratory for evaluation. The results will determine the extent of remediation required to restore the scene to its original condition.
- The On Scene coordinator is in charge of the scene operations.

10.3 The Operations Manager will:

- Assume the duties of the Transportation Manager in his absence.
- Provide support in the overall operations to minimize injuries, exposure, and environmental damage.
- Keep the Transportation Manager informed of any injuries and in the clean-up progress.
- Assure that all injured personnel have medical attention.
- Notify the customer that an incident has occurred and keep him informed to the progress of the clean up.
- Ensure that all appropriate agencies have been notified.
- Ensure the restocking of all emergency response supplies upon completion of the response.

10.4 The Dispatcher's Duties are:

- Assume the duties of the Operations Manager in his absence.
- Mobilize personnel and equipment as needed in response to contain the spill.
- Coordinate the removal of all contaminated material.

- Evaluate and utilize all resources available to assist in the operation.
- Act as liaison between Management and on scene personnel.

11.0 REPORTING REQUIREMENTS

11.1 Federal Notifications

DOT

Per 49 CFR 171.15, each carrier who transports hazardous materials (including hazardous wastes) shall, at the earliest practicable moment, notify DOT by calling 800-424-8802 to report a transportation incident (including loading, unloading, and temporary storage) in which:

11.1.1 As a direct result of hazardous materials –

- A person is killed; or
- A person receives injuries requiring his or her hospitalization; or
- Estimated carrier or other property damage exceeds \$50,000; or
- An evacuation of the general public occurs lasting one or more hours; or
- One or more major transportation arteries or facilities are closed or shut down for one hour or more; or
- The operational flight pattern or routine of an aircraft is altered; or

11.1.2 fire, breakage, spillage or suspected contamination occurs involving radioactive or etiologic agents.

Information to be supplied to DOT at the time of the notice shall include:

- Name of reporter.
- Name and address of carrier represented by reporter.
- Phone number where reporter can be contacted.
- Date, time, and location of incident.
- The extent of injuries, if any.
- Classification, name and quantity of hazardous materials involved.

- Type of incident and nature of hazardous materials involved and whether a continuing danger to life exists at the scene.

In addition to the telephone notification, requirements in Section 171.12, DOT also requires written notification pursuant to Section 171.16 for **any** unintentional release of a hazardous material from its package during transportation. Such notice must be made on DOT form 5800.1 within 90 days of the incident.

Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)

If an incident occurs in which a hazardous substance (as defined in 40 CFR Part 302) is released to the environment in an amount equal to or greater than its reportable quantity, the National response Center must be contacted immediately at 800-424-8802.

Toxic Substance Control Act (TSCA)

All releases of PCB-containing material (≥ 50 ppm) in excess of 10 lbs must be reported to the EPA Regional Office, Pesticides and Toxic Substances Branch.

11.2 State Notifications

Individual reporting requirements vary from state to state. If uncertain as to whether a spill has exceeded a certain states reporting limit, consult with your site manager. State authority contact numbers are listed in the Appendix.

11.3 Local Notifications

Local notifications include the police and fire departments. There may also be an organized hazardous materials response team, though these are usually managed as a division of the fire department. In most localities, dialing **911** will connect the caller to the emergency dispatch center. If not available, dial the operator for assistance.

12.0 FAILURE TO REPORT A SPILL

- Failure to report a spill will result in disciplinary action and possible termination.

- Failure to report a spill is a severe violation of **Federal Regulations** that can result in stiff penalties, fines, and can result in arrest.
- Under the current law, a driver failing to report a spill of hazardous material can be **imprisoned** up to one year. Report all spills, no matter how small, to your dispatcher or operations manager. Management will decide if the spill meets the federal reporting requirements.

13.0 EMERGENCY PHONE NUMBERS and RESPONSE CONTRACTORS

- **CIMA Services, L.P.**
Pasadena, Texas

APPENDIX 7.
CIMA INCIDENT REPORT - SPILL AT LAYDOWN YARD

SPILL INCIDENT REPORT FORM

1. Personnel Involved:

Name: Jose Ruiz Job Title: DOT Driver
Name: Juan Amerquita, Jr. Job Title: Dispatch/Trans. Manager
Name: Juan Amerquita, III Job Title: Spotter/Trans. Assistant
Name: Melissa Scheksnader Job Title: Environmental

2. Contractor Responsible for Spill Response: CIMA Services LP
Phone Number: 713-946-5853

3. Spill Information:

Container Type: Roll Tarp Box Container Contents: Chromium Impacted Debris
Spilled Substance: Rainwater with possible Chromium Contamination
Quantity Spilled (Estimate): 1-2 gallons
Date of Spill: 7/03/2023
Time Spill Started: 2:00 PM - Estimated Time Spill Ended: 2:04 PM - Estimated
Hazardous Substance: ☒ Yes ☐ No
If yes, does RQ apply: ☐ Yes ☒ No RQ Amount lbs
If RQ applies, was RQ reached or exceeded ☐ Yes ☐ No

4. Spill Location and Conditions:

Street Address, City, State: 3334 Strawberry Rd. Pasadena, TX
Location of Incident: CIMA Services Laydown Yard
Weather Conditions: Dry - Sunny
If Spill to Water,

Name of Water Body (if ditch or culvert, identify the water body that the structure discharges to):
N/A

5. Incident Details:

Driver picked up box without incident at the generating location. When dropping the box at CIMA yard, the spotter noticed liquid coming from back door. Driver

reloaded box on rail. Pads were placed under back of box and environmental was notified. Driver and spotter were unsure of what the liquid was due to box containing large debris. No additional water was visible in the box.

6. Actions taken:

Water was confirmed to be rainwater. Due to the debris being Chromium contaminated, we concluded the water could possibly be contaminated. Ground material was scraped up until no moisture was visible. Box was dried with rags. Ground material, rags and pads were placed in the box. Chains were tightened.

7. Person Responsible for Managing Termination/Closure of Incident or Spill:

Name and Phone: Melissa Schexnaider

Signature: Melissa Schexnaider Date: 7/03/2023
