BALTIMORE, MARYLAND DEPUTY COMMISSIONER

COMMISSIONERS

JEWELL W. SWOFFORD

CHAIRMAN

JOHN M. MORIN

JOHN J. KEEGAN

In reply refer to File No. 355-1042

April 13, 1943.

Dr. Robert A. Kehoe, Director,
Kettering Laboratory of Applied Physiology,
University of Cincinnati,
Cincinnati, Ohio.

Dear Dr. Kehoe:

Thank you for your letter of April 9, 1943, agreeing to review the record in the case about which I had previously written you. I am transmitting herewith the transcripts of the evidence taken at the two hearings held before me in the case of [REDACTED] vs. Bethlehem Steel Company.

After you have reviewed this evidence, will you kindly submit your report (in triplicate) discussing the case and indicating your opinion as to whether or not it is probable that this employee's disability was causally connected with the conditions of his employment in working as a burner aboard ships which were undergoing repair.

The employer advised me today that they are arranging to have a test of the employee's blood made at this time, for whatever this may be worth. They promised to send me the report thereon this week, and upon its receipt I will transmit the report to you.

Please return the transcripts with your report, and also forward your bill for services rendered.

Thanking you for your assistance and cooperation, I am

Very truly yours,

E.V. Parker,
Deputy Commissioner.
