high-temperature drying	471	full backward curve multiblade	435
heat and humidity control	481	motive power	439
internal moisture gradient	479	selection	436
low-temperature drying	471	ventilation	436
methods	469		
mechanism of drying	474	Ferrous pipe	299
moisture content calculations	482	Fiber saturation point in drying	477
omissions in drying cycle	476	Filters, air	184
radiant heat	470	Fittings, insulation for	416
removal of free water	477	Flow of steam in pipes	334
selection of fans	437	Flues, cleaning of	274
stages of moisture diffusion	474	Forced circulation	
vacuum drying	472	hot water heating	379
ventilation phase	487	warm air heating	148
Ducts		Forward curved multiblade fans	434
exhaust systems	452	Friction in duct elbows	449
friction in elbows	449	Friction losses in air ducts	447, 449
friction losses	447	Fuel oils for domestic heating	235
fundamentals of design	445	Fuel saving with insulation	31
installation	452	Full backward curve multiblade fans	435
insulation	456	Fumes, definition of	181
proportioning	449	Furnaces, warm air fan pressure	
warm air furnaces, for	134	arrangement of heaters	154
Dust		description of	149
collectors	466	design of	151
conveyor pipes	467	fuels	150
definition of	181	gas-fired residence system	157
determinations	103	large buildings	153
exhaust systems	457	rating	150
fans for collecting and conveying	438	selection of heaters	153
removal efficiency of air cleaners	187	small buildings	156
		specifications for residence system	158
E		Furnaces, warm air gravity	
Economic thickness of pipe insulation	416	calculating heat losses	129
Effective temperature	85, 93	code for installing	141
Efficiency of employees, air conditioning for	160	design of	128
Ejector type ventilators	115	ducts	134
Electric motors and controls for mechanical		forced or booster circulation	148
stokers	215	grilles	134
Electricity		leader pipe sizes	129
heating costs	247, 248	register area	134
heat equivalents of	249	recirculating ducts and grilles	134
hot water heaters	249	size of	136
hot water heating system	249	wall stacks	132
storage system	248		
warm air heating system	249		
Enclosures, effect of on heat emission of		G	
radiators	280	Gas	
Equilibrium moisture content in drying	479	air for combustion	218
Evaporation		boilers	227, 228
rate of	166	chimneys	258
temperature of	162, 163	cross-connecting boilers	230
Exhaust systems, pneumatic		control features	230
air velocity	459	conversion burners	224
calculations	464	calorific value	217
conveyor pipes	467	fuel costs	219
design of hoods	467	insulation and weatherstripping	224
maintenance	468	requirements of buildings	220
requirements of efficient operation	458	ratings for appliances	229
types	457	selection of boilers	228
typical layout	464	space heaters	228
Expansion and contraction of piping	306, 419	table of properties	522
Expansion of solids, table of	518	warm air furnaces	227
Experimental technique in design of dryers	489	Generators, ozone	494
F		Gravity circulation	
Factory temperature control	294	hot water heating	367
Falling rate period in drying	475	warm air heating	127
Fans		Gravity steam-heating systems	
arrangement of drive	443	definition	331
centrifugal	433	one-pipe	341
characteristic curves	432	one-pipe down feed	343
designation of	443	two-pipe	343
disc and propeller	432	vapor	345
drying	437	Gravity ventilating systems	119
dust collecting and conveying	438	Greenhouse heating	499
		Greenhouse temperature control	296
		Grilles for warm air furnaces	134
