Dr. Harold A. Beatty
Ethyl Corporation
1600 West Eight Mile Road
Ferndale 20, Detroit, Michigan

Dear Hal:

There is little that I can say by way of constructive criticism about your draft thus far of the memorandum or statement on the significance of tetraethyl lead in the development of high octane gasoline. In the first place, I don't know enough about the matters under discussion to do so, and therefore I should be very presumptuous to remark on anything except the impression made upon me. This impression, I may say, is very good. The questions raised seem to me to be the reasonable ones, and the whole approach to these seem to me to be quite objective.

I have queried one aspect of the subject in the left margin, my feeling being that if present movement on the country's highways is satisfactory and safe, it is only so because it is less unsatisfactory and less unsafe than it might be if certain improvements or advances had not been made. It would seem to me that some comment might be required here or later to indicate what is meant. Safety, for example, in terms of miles traveled or in terms of the density of cars, has been improved, I believe, but in my unstatistical feeling, driving on the highway is no longer a pleasure but a chore, and it is fraught with opportunities for disaster on all sides. I suspect that other people feel the same, and therefore this clause strikes a somewhat incongruous note. This can be straightened out, I believe.

I shall look forward to seeing the finished job, for my own interest and education.

With kindest regards,

Sincerely yours,

Robert A. Kehoe, M. D.
