

1
2 All asbestos waste should be disposed of in accordance with OSHA
3 and EPA asbestos regulations. During removal of vacuum bags, an
4 approved respirator, as described in (2) above should be worn.

5 (f) Good housekeeping is essential in a workplace where asbes-
6 tos containing materials are handled. Industrial vacuum
7 cleaners equipped with multiple stage high efficiency
8 filters should be used for removing accumulations of
9 asbestos dust and waste. Never use compressed air or dry
10 sweeping for cleaning. Water or other dust suppressants
11 should be applied if brooms are used.

12 (g) Good personal hygiene practices are important in minimiz-
13 ing asbestos dust exposure. Do not smoke. Wash before
14 eating. Shower after work. Change to work clothes upon
15 arrival at work and change from work clothes at conclusion
16 of work. Work clothing should not be taken home. Laun-
17 dering as asbestos contaminated clothing shall be done so
18 as to prevent release of airborne asbestos fibers in
19 excess of the exposure limits.

20 CAUTION: DO NOT BREATHE ASBESTOS DUST

21 (j) No. Abex does possess samples of the more
22 recently marketed asbestos-containing friction product con-
23 tainers.

24 (k) Abex objects to this Interrogatory on the
25 grounds that it is overly broad and lacks particularity as to
26 what information is being requested. Abex further objects to
27 this Interrogatory to the extent that it inquires into proprie-
28 tary or "trade secret" information. Without waiving these ob-
jections, Abex states that it has placed so-called "edge codes"
on certain of its asbestos-containing friction products. The
precise duration cannot be ascertained with any specificity.
