Re: Inhalation of Vapors from PDS No. 54201 KA
Your letter of 2/25/69 to Monsanto Company

Your letter was forwarded to me for reply since your request involves one of our dielectric fluids. In reply to your request regarding the characteristics of Inerteen, I am enclosing one of our Inspection and Maintenance Guides as a reference. As for its propensities, it is a very stable material replacing mineral oil because of its excellent electrical properties and its flame resistance. Handling precautions are spelled out on pages four and five.

We trust this does answer your request.

Sincerely,

J. G. (Jim) Bryant
