

July 9, 1958

Mr. George H. Reilly
Director of Safety
National Tube Division
U. S. Steel Corporation
525 William Penn Place
Pittsburgh 30, Pa.

Dear friend George:

At the Safety Congress I promised to send you information on porphyrins as soon as they were mimeographed. I found this carbon copy in my file: so I am mailing it now.

Perhaps you have heard that Mr. Merritt had a stroke and died on Decoration Day. His loss is greatly felt by this Division and the Commission is trying desperately to find a competent replacement for him.

Tell Kenny Morse that the Huffman-gas-titration method still stands the test. Recent literature discloses that the least detectable odor of ammonia is less than 5 ppm, which is a figure we found in our hotel room experiment.

Very truly yours,

Dwitt Huffman
Industrial Hygiene Engineer
