Mr. Curtis L. Lopes
Cornell Dubilier Electronics
1605 E. Rodney French Blvd.
New Bedford, Mass. 02744

Dear Mr. Lopes:

Re: "AD HOC PCB Committee"

Tabulated below are the PCB analyses of various samples taken on 12/5/74 and 12/6/74.

All PCB concentrations are expressed in micrograms per liter. Same as parts per billion (ppb).

		PCB's
I.	Composite sample taken 12/5 and 12/6/74 (Sample of major plant effluent stream taken from middle most discharge. Flow estimated 100 GPM. Composite obtained over 20 hour sampling period.)	705.3 ppb
II.	Grab sample taken 12/6/74 (Taken at 24" sewer at low tide.)	45.1 ppb
III.	Grab sample taken 12/6/74 (Taken from southmost discharge. Flow estimated 10-20 GPM.)	1,624 ppb
IV.	Plant water taken 12/6/74 (Grab sample taken in boiler room?)	< 0.25 ppb
V.	Fort Phoenix Reach taken 12/6/74 (Grab sample taken along shore line south of city storm sewer discharge.)	11.1 ppb

The above information, plus flow data from your plant, should permit you to complete the EIA questionnaires. You are familiar with where and how samples were taken. Call me (618) 271-5835 if you have any questions.

Very truly yours,

Edward E. Stewart
