Ashtabula's Compliance with
EPA Vinyl Chloride Regulation

On October 21, 1976, the Federal EPA issued a standard for Vinyl Chloride. This standard will require modification of our present operation to reduce the emission of vinyl chloride into the air.

I am requesting the assistance of Central Engineering in the engineering and planning of the EPA projects for the Ashtabula plant. Included in our present planning are the following:

1. An incinerator to reduce the vent gases to less than 10 ppm.
2. A water stripper to reduce the waste process water to less than 10 ppm.
3. A purge system for our compressor seals.

Your assistance will be appreciated.
