

INTER-OFFICE MEMO **TENNESCO CHEMICALS, INC.**

TO	Y.B. Hanna	AT Flemington	DATE 10/18/71
FROM	H.B. Carr	AT Burlington	COPY TO F.W. Kanzler M.C. Spalding File
SUBJECT	Plant Effluent Control		

As indicated in the cover memo to your technical memo, we wish to set up a program for monitoring cadmium and lead in the effluent of our plants. We want to start this program as quickly as possible. Coordinate the program with M.C. Spalding for Nixon and F.W. Kanzler for Burlington.

As we discussed on 10/18, is it possible to get combination element lamps for lead and cadmium? If not, let me know what is involved as far as testing is concerned. I want to see your program by 10/22 which will include sampling, test frequency, as well as sampling points. We will want to include the Newton and Arlington Heights Plants but will hold off until the program is established for our plants in New Jersey.
