Subject: QUESTIONS CONCERNING VCM HEALTH

Interoffice
Communication

VISTA

I understand there have recently been several questions concerning potential health effects of vinyl chloride exposure, specifically brain cancer. The questions have focused on a multitude of issues which we are working to obtain information on so that we can communicate it to all of you. Much of this information is contained in several studies which we'll be able to provide to employees.

We are aware of Occupational Epidemiological studies by Sir Richard Doll and Dr. Otto Wong regarding vinyl chloride exposure. We are currently in the process of gathering those studies which I will summarize and give to employees as soon as possible. We will also make the full studies available to those who want them.
