

THE INDUSTRIAL PRESS

93 Worth Street, New York, 13, N. Y.

Technical Books on Heating, Ventilating, Air Conditioning, Piping and Plumbing

HANDBOOK OF AIR CONDITIONING, HEATING AND VENTILATING

Edited by Clifford Stock
Completely new book containing thousands of facts, figures, data and principles on: Air Conditioning, Air Handling and Ventilation, Fuels and Combustion, Heating and Heat Transfer, Piping and Plumbing, Motors and Motor Starters, Mathematical Data and Drafting Room Symbols. Contains section on Terminology and complete cross-index. 1094 Pages, 7 1/4 in. x 10 1/4 in., 598 Charts, Maps, Illus., 518 Tables, \$15.00.

INDUSTRIAL HEAT TRANSFER by F. W. Hutchinson
Provides 123 time-saving working graphs for the direct solution of most commonly encountered problems. Graphs are equal in accuracy to the equations from which they are derived and help eliminate errors in calculation. 336 Pages, 136 Charts and Illus., \$7.00.

METHODS OF JOINING PIPE by J. E. York
The most detailed information available on standard and special joints for all types of metallic, glass, tile, plastic and concrete pipe. Data on joints designed to take up movement due to expansion and contraction. 236 Pages, 249 Illus., \$4.00.

PIPEFITTERS HANDBOOK—2nd Edition by F. R. Lindsey
Original tables enable pipefitters to solve problems of pipe bending, mitering, layout, threading, etc., either in the shop or in the field. Handy size, durable binding. 282 Pages, \$5.00.

PLANT AND PROCESS VENTILATION by W. C. L. Hemen
Design factors and data that can be applied to any situation. Principles are clear, logical. Shows how to estimate exhaust characteristics of any cold, multi-directional process; and obtain exhaust requirements for such a situation. 448 Pages, 172 Illus., \$9.00.

RADIANT HEATING—2nd Edition by T. Napier Adam
Latest developments, basic principles, facts, practical working data on applications of radiant energy for heating and cooling. Facts, figures, design data can be applied directly in designing and installing radiant heating systems without calculations. 504 Pages, 337 Illus., \$6.00.

DESIGN OF AIR CONDITIONING SYSTEMS by F. W. Hutchinson
115 full-page charts solve problems of air conditioning system design involving cooling load, duct design, psychrometrics, solar energy, comfort conditioning, panel cooling, etc. For each chart the engineering and mathematical background plus design example and solution are given. 336 Pages, 118 Illus., \$7.00.

DESIGN OF HEATING AND VENTILATING SYSTEMS by F. W. Hutchinson
96 full-page charts solve problems of heating and ventilating involving load determination, duct design, panel heating, solar heating and combustion analysis. Companion book to Design of Air Conditioning Systems. Same methods to explain and solve problems are used. 320 Pages, 96 Charts, \$7.00. By mail order, Canada and overseas, \$8.50. SET OF BOTH, \$12.50.

DESIGN OF INDUSTRIAL EXHAUST SYSTEMS by J. L. Alden
How to design, build or buy an exhaust system that will meet the requirements of law and industry. Covers flow of fluids—hood forms—air flow through hoods—pipe resistance—piping design—dust separators—low pressure conveyors—centrifugal exhaust fans—structural details—field measurements and their interpretation. 252 pages, 122 Illus., \$5.50.

ELECTRICAL TESTING AND TROUBLESHOOTING by Philip Green
Simple, straightforward, time-tested procedures show how to locate and correct faults in circuits of all kinds including controllers, motors, transformers and transmission lines. Most tests described are performed with the equipment isolated from the power line. Written by an expert in electrical troubleshooting. 160 Pages, 34 Tables, \$5.00.

EXHAUST HOODS by J. M. DallaValle
Practical hood design; latest principles of air handling, contaminant dilution and transport velocities; design of hoods for control of dust, mist, fumes, vapors, gases. Simple formulas and diagrams show exact procedures. 130 Pages, 127 Illus., \$4.00.

FLOW AND FAN by C. H. Berry
Covers the flow of gas through ducts, and fan performance and control; moving air through ducts, fan selection and control, duct arrangement, system characteristics, flow analysis. Basic data and methods used to calculate system resistance. Practical information for selecting a fan for any duty. 232 Pages, 84 Illus., \$4.00.

FLUID FLOW IN PIPES by C. H. McClain
How to solve problems involving the flow of liquids and gases through pipes. How to handle viscosity, friction, heat, and other factors expressed in various dimensional systems. Worked-out problems show applications of principles. 124 Pages, 18 Illus., \$4.00.

FUEL OIL MANUAL—2nd Edition by P. F. Schmidt
Covers characteristics and uses of every type and grade of fuel oil. Explains the meaning of each oil property, and shows how this information is applied in selecting, handling and burning fuel oil. A special chapter on fuel oil additives and another on troubles and remedies. 176 Pages, 34 Tables, \$4.50.

HIGH TEMPERATURE WATER SYSTEMS by O. S. Lieberg
A thorough explanation of the principles, design, selection of equipment, operation and economics of high temperature water systems. Contains original design data used in actual systems designed by author. Features design of typical system based on principles set forth in this brand new book. 224 Pages, 109 Illus., Tables, \$6.50.

Prices slightly higher in Canada and overseas; write for catalog.

KEENEY PUBLISHING COMPANY

6 North Michigan Avenue, Chicago 2, Ill.

Heating, Piping & Air Conditioning is the one monthly publication that adequately serves the field of industry and large buildings. It is devoted to the design, installation, operation, and maintenance of heating, piping and air conditioning systems in plants, commercial, institutional and public buildings.

Each January issue includes a complete directory of commercial and industrial heating, piping, and air conditioning equipment, which lists all products, their trade names, and the manufacturers' addresses. It is the one established buying and specifying guide of the industry.

Heating, Piping & Air Conditioning is read by consulting engineers and architects... contractors... and engineers in charge of heating, piping and air conditioning in industrial plants, and other large buildings, federal, state, and city governments, school boards, and public utilities. Most of ASHAE members are subscribers.

Such coverage means, for the advertiser, consideration at all points in the selling of a heating, piping, or air conditioning product... consideration in its selection during the preparation of plans and specifications; in its actual purchase for installation; in its year-round buying for operating and maintenance requirements. Without waste, the manufacturer of air conditioning products and equipment can reach through Heating, Piping & Air Conditioning those from whom he is seeking the necessary engineering acceptance.

SUBSCRIPTION PRICES—U. S. A. \$3.00 a year.

Canada, \$5.00 a year. Spain, Central and South America—\$6.00 a year. Elsewhere \$7.00 a year.

(Prices subject to change without notice due to impending increases in postal rates.)

MEMBER OF THE ASSOCIATED BUSINESS PUBLICATIONS AND THE AUDIT BUREAU OF CIRCULATIONS

AMERICAN ARTISAN is truly THE magazine of central residential air conditioning, warm air heating, and sheet metal contracting. Its readers are warm air heating and sheet metal contractors, dealers, jobbers, and manufacturers.

Special features of each issue have been devoted to air conditioning since 1932, when it first became apparent that air conditioning for homes was to be along the lines of the central forced warm air heating system. As a result of the ready adaptability of this type of heating system to all air conditioning factors, hundreds of thousands of homes today have winter air conditioning—supplied through forced warm air heating with air cleaning and humidification. Cooling apparatus can be attached to these systems readily whenever year-round air conditioning is desired.

Each January issue includes the only complete directory of central residential air conditioning, warm air heating, and sheet metal products and equipment, which lists all products, their trade names, and the manufacturers' addresses.

The key man in the central residential air conditioning picture is the warm air heating and sheet metal contractor—the one man experienced in "treating air" at a central place and getting it properly distributed. And American Artisan is the key publication—because it reaches these key men with information that has made it the recognized authority on correct practice in residential air conditioning, warm air heating, and sheet metal contracting.
