OSHA Enquiry

Further to my note of 14th July, there is an additional piece of information which I consider in retrospect should have been annotated at the foot of Tables 7 and 8.

This could read :

"The person referred to under cohort number 1269 was engaged in ship-building or repair between 1925 and 1930 and could have had associated exposure to asbestos dust in this occupation."

This fact was mentioned in Dr. H. C. Lewinsohn's paper "A Mortality Study amongst Workers in an English Asbestos Factory" presented in Brighton last year.

I enclose two copies of this letter in case you should wish to pass one to Dr. Hans Weill.

M. Jacobs
