Accident Prev

Asphalt Roofing

CONTEST REPORT - SECOND QUARTER 1977

The total number of OSHA lost workday cases, reported by our member plants continues to increase. The total incidence rate for all groups repeats the same pattern as shown below for two previous years.

The best antidote is the prevention of disabling injury, by preventing the accident. This achievement has been reported by 14 of the 88 competing plants for this first six months.

Training of employees in accident prevention is a vital part of every program. The new ARMA Audio Visual Employee Safety Training Program was created to provide this training, and all plants should make use of this valuable aid as part of a regular program.
