The Mines Safety Appliances Company
Braddock and Thomas Blvd.
Pittsburgh, Pennsylvania

Gentlemen:

Please forward to us at your earliest convenience your latest catalogue or descriptive bulletin describing your air-line respirators (or hose masks) with associated hand-driven pump for air supply, and include your price list, together with a quotation of the discount in lots of ten or more of the complete one man assemblies, each with 75 feet of 1 inch hose.

The conditions under which the masks will be used may permit the air hose lines to come into contact with, or to be temporarily immersed in organic liquids such as benzol or CCl_4. Is your hose of such material or so coated as to withstand solution or penetration by such liquids?

If you have an agent or representative in this territory who can supply us with equipment for purposes of inspection, we would like to have him call.

Very truly yours,

WFM:VN

Willard F. Machle, M.D.
